

Dew Guard

Dew Suppressant

- Control moisture on the turf from dew and frost
- Reduce the drying time of leaf wetness
- Start early, play longer
- Faster frost recovery times

Dew Guard

Dew Suppressant

Dew Guard, dew suppressant and canopy moisture inhibitor, is designed to control the formation and retention of moisture on turf from dew and frost. **Dew Guard** will also allow for faster turf canopy drying after irrigation, rainfall or frost.

Dew Guard will suppress dew formation on turf areas such as greens, tees, fairways and sport fields. **Dew Guard** is effective at very low rates of use. Apply **Dew Guard** as a foliar spray with boom, handheld or backpack sprayer, allow the treated area to dry completely before applying irrigation or when rainfall is expected. If **Dew Guard** is not allowed to thoroughly dry, applied irrigation or rainfall can remove **Dew Guard** from the leaf blade, decreasing efficacy. **Dew Guard** is most effective during the colder seasons when turf growth and clipping removal are lower.

PRODUCT DETAILS

- Reduces leaf moisture, reducing dew formation
- Drying time is reduced after rainfall or irrigation
- Reduced turf canopy moisture lessens disease incidence
- Frost recovery times are reduced
- Reduced clumping when mowing
- Low rate effectiveness

DIRECTIONS FOR USE

Apply **Dew Guard** as a foliar spray to dry turf. Allow **Dew Guard** to dry thoroughly prior to watering. Watering in is not required. Apply 3 to 5 L/ha in 200 to 400 L of water. A minimum of 200 L of water per hectare per application is required. Repeat application at 7 to 14 day intervals or as necessary. Optimal application rates will be determined by the height of cut and foliage surface area.

Available in 20 L packaging
